Perhaps reasoning that it was unwise to meddle with a winning formula, Vauxhall wisely chose to style the Corsa in an evolutionary rather than revolutionary manner when the second generation model was unveiled in 2000. The first models arrived in UK dealers in October 2000 and were an instant success.

The Opel Corsa is a supermini that has been produced and engineered by the German automaker Opel since 1982 and has also been sold under a variety of other brands (most notably Vauxhall, Chevrolet, and Holden), and also spawned various derivatives in different markets, all of which are listed in appropriate sections below.The names Vauxhall Nova, Holden Barina and Chevrolet Chevy have been ...

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

The automobile sector is one of the most archetypal global industries and is seen by many as one of the main drivers behind the homogenisation of world markets due to firms' internationalization strategies and the social practices that firms impose. This book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued. It highlights the diversity and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade. This book looks specifically at the American and Asian car industry.

This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

Hatchback, Corsavan & Combo Van, inc. special/limited editions. Does NOT cover facelifted range from Oct 2003. Petrol: 1.0 litre (973cc) 3-cyl, 1.2 litre (1199cc) & 1.4 litre (1389cc) 4-cyl. Does NOT cover 1.8 litre (1796cc). Turbo-Diesel: 1.7 litre (1686cc).

Following the success of the first (1995) edition, this fully updated report will provide a global overview of the use of automotive plastics and composites in passenger vehicles, with an analysis of markets and trends to the year 2007. Special attention is given to vehicle weight reduction. For a PDF version of the report please call Tina Enright on +44 (0) 1865 843008 for price details.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

Sustainable mobility has long been sought after in cities around the world, particularly in industrialised countries, but also increasingly in the emerging cities in Asia. Progress however appears difficult to make as the private car, still largely fuelled by petrol or diesel, remains the mainstream mode of use. Transport is the key sector where carbon dioxide (CO2) emissions seem difficult to reduce. Transport, Climate Change and the City seeks to develop achievable and low transport CO2 emission futures in a range of international case studies, including in London, Oxfordshire, Delhi, Jinan and Auckland. The aim is that the scenarios as developed, and the consideration of implementation and governance issues, can help us plan for and achieve attractive future travel behaviours at the city level. The alternative is to continue with only incremental progress against CO2 reduction targets, to 'sleepwalk' into climate change difficulties, oil scarcity, a poor quality of life, and to continue with the high traffic casualty figures. The topic is thus critical, with transport viewed as central to the achievement of the sustainable city and reduced CO2 emissions.

Paradoxes of internationalization deals with British and German trade union responses to the internationalization of corporate structures and strategies at Ford and General Motors between the late 1960s and the early twenty-first century. The book is based on research in numerous archives in Britain, Germany and the United States. The book points to the paradoxical effects of internationalization processes. First, it demonstrates how internationalization reinforced trade unions' national identities and allegiances. Second, the book highlights that internationalization made domestic trade union practices more similar in some respects, while it simultaneously contributed to the re-creation of diversity between and within the two countries. Third, the book shows that investment competition was paradoxically the most important precondition for the emergence of cross-border cooperation initiatives. The book will be of interest to academics and students in a range of disciplines from comparative industrial relations, to international political economy, business studies and transnational history.
