Common Core Algebra I. In this course students will learn about a variety of advanced topics in algebra. Students will expand their understanding about functions by learning about polynomial, logarithmic, and trigonometric functions. These new functions along with linear, quadratic, and exponential, will be used to model a variety of problems, including compound interest, complex numbers, growth and decay, projectile motion, and periodic phenomena.

Algebra 2 develops students' conceptual understanding, fluency, and ability to apply advanced functions. Students draw connections between function types. In particular, students apply skills learned early in the year with linear, quadratic, and polynomial functions to inform their understanding later in the year when they study rational, radical, and trigonometric functions.

Algebra 2 Curriculum - Common Core Lessons & Assessments ...

In this course students will explore a variety of topics within algebra including linear, exponential, quadratic, and polynomial equations and functions. Students will achieve fluency in solving linear and quadratic equations as well as with manipulation of polynomials using addition, subtraction, multiplication, and factoring. Students will understand the key differences between linear and exponential functions.

Algebra II Module 1: Polynomial, Rational, and Radical Relationships. Students connect polynomial arithmetic to computations with whole numbers and integers. Students learn that the arithmetic of rational expressions is governed by the same rules as the arithmetic of rational numbers. This unit helps students see connections between solutions to polynomial equations, zeros of polynomials, and graphs of polynomial functions.
