A United Nations representative recently defined the Blue Economy as an economy that "comprises a range of economic sectors and related policies that together determine whether the use of ocean resources is sustainable. An important challenge of the blue economy is to understand and better manage the many aspects of oceanic sustainability, ranging from sustainable fisheries to ecosystem health to preventing pollution.

The Blue Economy, version 2.0: 200 Projects Implemented, US\$ 4 Billion Invested, 3 Million Jobs Created

The Blue Economy - Wikipedia

The Blue Economy has created over 200 projects which have attracted by 2016 approximately \$4 billion in investments and generated some 3 million jobs. We have described 10 cases in detail offering an insight into the people, the places, the money and the impact. We also describe how these projects emerge and turn into self-evolving projects. As the projects evolve, more individually described initiatives (Cases 1-100) will evolve into clusters of innovations generating value for all.

The Blue Economy takes readers beyond the obvious and aims to wake up the entrepreneur in all of us. The innovations it explores are founded in solid science and demonstrated by multiple platforms. Committed grass-roots entrepreneurs worldwide can realise triple cash flow using open-source innovations that create competitive business models. This book will encourage thousands and perhaps millions of us to apply a Blue Economy business model that will shift us from scarcity to abundance.

As humanity enters the Anthropocene epoch the oceans are more at risk than ever before as a result of the increased exploitation of its resources. The Indian Ocean is the third largest ocean in the world comprising 20% of the water on the Earth's surface. The sea lanes in the Indian Ocean are among the busiest in the world with more than 80 percent of global seaborne trade in oil transiting through the Indian Ocean and its vital chokepoints and an estimated 40% of the world's offshore oil production comes from the Indian Ocean. The importance of this region cannot be underestimated and there is no doubt that there are many opportunities for economic growth and job creation presented by the waters washing the shores of the Indian Ocean Rim. In order to ensure a desirable future for humanity it is necessary to make use of the ocean's resources in a sustainable and responsible manner. Climate change is affecting the Indian Ocean negatively, placing a strain on the ability to ensure food security and damaging the economies of small island states that depend on fisheries and aquaculture for their livelihoods. Increasing ocean temperatures and ocean acidification are taking a toll on ecosystems. This book is the first of its kind, providing fresh insights into the various aspects and impacts of the Blue Economy in the Indian Ocean Region: from shifting paradigms, to an accounting framework, gender dynamics, the law of the sea and renewable energy, this handbook aims at increasing awareness of the Blue Economy in the Indian Ocean Region and to provide evidence to policy-makers in the region to make informed decisions. The contributions are from a mixture of disciplines by scholars and experts from seven countries.

Current worldwide trends are not sustainable. The Club of Rome's warnings published in the book Limits to Growth are still valid. Remedies that are acceptable for the great majority tend to make things worse. We seem to be in a philosophical crisis. Pope Francis says it clearly: our common home is in deadly danger. Analyzing the philosophical crisis, the book comes to the conclusion that the world may need a "new enlightenment": one that is not based solely on doctrine, but instead addresses a balance between humans and nature, as well as a balance between markets and the state, and the short versus long term. To do this we need to leave behind working in "silos" in favor of a more systemic approach that will require us to rethink the organization of science and education. However, we have to act now; the world cannot wait until 7.6 billion people have struggled to reach a new enlightenment. This book is full of optimistic case studies and policy proposals that will lead us back to a trajectory of sustainability. But it is also necessary to address the taboo topic of population increase. Countries with a stable population fare immensely better than those with continued increase. Finally, we are presenting an optimistic book from the Club of Rome.

"Illusions of Location Theory: Consequences for Blue Economy in Africa" questions the relevance of "location theory" in explaining the coastal-hinterland continuum and the implications for the utilization of blue economy ecosystem in such a contested space in Africa. It pays more attention to territorial contestations, maritime disputes, vulnerabilities of landlocked states, and expansionist policies as displayed through spatial organizational regimes. These areas of investigation have previously been largely studied from the narrow perspective of "location", unduly focusing on comparative advantages of "distance", while neglecting the influence of "forces" such as technology, ideology, and the power of mental mapping in spatial decision making. This volume puts forward the argument that the harmonious relationship between states, and efficient exploitation of the blue economy ecosystem in ways that promote peace between states, lies not only in the structural transformation of markets, but also in bridging the spatial and social divide between the coastal and hinterland societies. Thus, this work proffers possibilities for a holistic regime for managing Africa's coastal-hinterland continuum through innovative strategies such as SMART blue economies and the infusion of the geopolitical dimension into the management of maritime and territorial diplomacy. The combination of theoretical and empirical analysis, buttressed by in-depth case studies of what works in the management of blue economy ecosystem and what does not work, make this volume ideal for researchers, students, and practitioners interested in African regional studies, African political economy, political geography, strategic military studies, governance of seas and oceans, and maritime science/diplomacy.

This unique compendium provides an insight into the role of emerging marine biorefineries based on macroalgae (seaweeds) in the development of a sustainable use of ocean resources for economic growth-blue economy.The useful reference text shows a complete picture on the motivation to develop seaweed technologies, and how the combination of biology, cultivation technologies and downstream processing with economics can address the social challenges through the blue growth.

The book is designed to help public and private decision-makers and academics deepen their knowledge and understanding of the contexts, obstacles and challenges of a variety of business types involved in Industrial Symbiosis and Circular Economy practices. Industrial Symbiosis is reported in the Action Plan on the Circular Economy developed by the European Commission in 2015 (COM / 2015/0614 final) and in its revision of 14 March 2017, but relatively little is known of how these practices start, develop or fail, and mutate in a rapidly changing context. Including selected contributions presented at the 24th ISDRS 2018 Conference, "Actions for a Sustainable World: from theory to practice" in the two theme tracks "5c. Circular economy, zero waste & innovation" and "5g. Industrial symbiosis, networking and cooperation as part of industrial ecology", this book offers a transdisciplinary perspective on real experiences of industrial symbiosis, performed both by industries and the scientific community, best practices, success and unsuccessful cases (implemented or under implementation), with the final aim to promote the adoption of Industrial Symbiosis as an operational and systematic tool for the Circular Economy. In particular, a focus on the environmental, social, and economic impact of Circular Economy and Industrial Symbiosis practices, and how those impacts may be context and/or scale dependent is given.

This book discusses human factors research directed towards realizing and assessing sustainability in the built environment. It reports on advanced engineering methods for sustainable infrastructure design, as well as on assessments of the efficient methods and the social, environmental, and economic impact of various designs and projects. The book covers a range of topics, including the use of recycled materials in architecture, ergonomics in buildings and public design, sustainable design for smart cities, design for the aging population, industrial design, human scale in architecture, and many more. Based on the AHFE 2018 International Conference on Human Factors, Sustainable Urban Planning and Infrastructure, held on July 21-25, 2018, in Orlando, Florida, USA, it offers various perspectives on sustainability and ergonomics. As such, it is a valuable reference resource for designers, urban engineers, architects, infrastructure professionals, public infrastructure owners, policy makers, government engineers and planners, as well as operations managers and academics active in urban and infrastructure research.

Preparing a Workforce for the New Blue Economy: People, Products and Policies discusses the Blue Economy, how the industry will develop, and how to train the next generation. The book considers the use of big data, key skillsets, training undergraduate and graduate students, the Transition Assistance Program (TAP) in the US, economic opportunities in African coastal countries, and governmental agencies, non-profits and NGOs. Finally, a broad range of case studies are provided, covering oil spills, commercial fishing, data protection and harvesting, sustainability and weather forecasting, all presented to highlight the educational requirements of the workforce and potential economic opportunities. Coordinates efforts from different disciplines and sectors, and shares effective teaching practices and approaches Includes comprehensive case studies that highlight the educational requirements of the workforce and potential economic opportunities Presents a framework for unifying several workforce sectors that are dependent upon the ocean

Dr. Gunter Pauli is challenging the green movement he has been so much a part of to do better, to do more. He is the entrepreneur who launched Ecover; those products are probably in many of your homes. He built the largest ecologically-sound factory in the world. His participation in the Club of Rome and the founding of Zero Emissions Research Institute (ZERI) has made an immense contribution to sustainability both in terms of research, public awareness and articulating a visionary direction. He has dedicated himself to teaching and the hands-on implementation of projects that have brought healthy environments, good nutrition, health care and jobs in sustainable commerce to a myriad of places in the world.
