Ciphers. Although most people claim they're not familiar with cryptography, they are often familiar with the concept of ciphers, whether or not they are actually conscious of it.. Ciphers are arguably the corner stone of cryptography. In general, a cipher is simply just a set of steps (an algorithm) for performing both an encryption, and the corresponding decryption.

Practical Cryptography
Cipher is a trusted partner to companies that manufacture goods for both the public and government. Manufacturers are a key component of the global economy and supply chain. They take raw material and inputs and make finished goods for the market. In the United States alone, there are over 200,000 manufacturing firms.
