If the pattern of inheritance  
(dominant or recessive) is known,  
the phenotypic ratios can be  
inferred as well. For a monohybrid  
cross of two true-breeding  
parents, each parent contributes  
one type of allele. In this case,  
only one genotype is possible. All  
offspring are  $Yy$  and have yellow

2 4) Magic runs in families. This is influenced by a complex pattern of inheritance. There is a single gene that codes for magical ability (M= magical (wizard or witch); m= non-magical (Muggle). However, there is also a second regulatory gene involved in the expression of magical ability (S= magic ability expressed), s= magic ability not expressed). a) Hermione Granger is an impressive young ...
