Jon Moore Every Complex

Problem Has A

Every complex problem has a solution which is simple, direct, plausible—and wrong. There's always an easy solution to every human problem—neat, plausible and wrong. These expressions have been attributed to the famous humorist Mark Twain, the witty curmudgeon H. L. Mencken (Henry Louis Mencken), and the insightful management guru Peter Drucker. Which version is correct and who should receive credit?

Does every complex problem have an answer that is clear ... For every complex problem there is an answer that is clear, simple and wrong. (One of the many wonderful quotes from H L Mencken. See [here](#) for more.) And nowhere is this more true than in health care, where we have so many highly intelligent people, caring deeply about the quality of care patients receive, who can find themselves, in tackling problems, devising solutions that make things worse rather than better.

For every complex problem there is an answer that is clear ... Every complex problem can be consider to be a symptom of another problem. One of the

H. L. Mencken - For every complex problem there is an...
Friday, 30th December. It's tragic when a good quote is ruined by its context. Versions of the HL Mencken quip about simple solutions to complex problems delights those of us who love wicked problems. A common version of the quote is "For every complex problem there is an answer that is clear, simple, and wrong.". After thirty years of education I shouldn't repeat a quote without verifying its source, especially since it is so easy to do so these days.

give you more than people admire. It will guide to know more than the people staring at you. Even now, there are many sources to learning, reading a record still becomes the first out of the ordinary as a good way.

Every Complex Problem Has A Simple Solution

Just as you can have equations with real numbers, you can have equations with complex numbers, as illustrated in the example below. Example Solve each of the following equations for the complex number z . (a) $4 + 5i = z - (1 - i)$ (b) $(1 + 2i)z = 2 + 5i$ Solution (a) Writing $z = x + iy$, $4 + 5i = (x + iy) - (1 - i)$ $4 + 5i = x - 1 + (y + 1)i$
