Dietary therapy is an approach to help control seizures, usually in conjunction with seizure medications. The classic ketogenic diet, a special high-fat, low-carbohydrate diet, is prescribed and monitored by a physician and nutritionist and can help control seizures in some people. It can help both children and adults with refractory seizures.

Osteoporosis treatment: Medications can help - Mayo Clinic

1. Introduction. Food therapy of traditional medicine aims to maintain balanced nutrition through diet. Medical diet therapy, however, is to achieve the balance of Yin and Yang through the combination of nutrition and medicine. There are both connections and distinctions between them.
