Bronze is an alloy of tin/copper. On the other hand, iron is a naturally occurring metal. One of the differences that can be seen between the two metals is that bronze is denser than iron. Unlike bronze, iron can easily be bent.

### Difference Between Iron and Bronze | Difference Between

The substitution of iron for bronze in tools and weapons from about 1000 bc was the result of iron's abundance compared to copper and tin rather than any inherent advantages of iron. Bell metal, characterized by its sonorous quality when struck, is a bronze with a high tin content of 20–25 percent.

### Bronze | alloy | Britannica

To sum up, the period of Bronze Age man lasted for almost 1,500 years, a time that took the giant step from the Stone Age to the Iron Age.

### BBC - History - Ancient History in depth: Bronze Age Britain

Iron is not much harder than bronze. Bronze and tin are relatively easy to extract from ore, whereas iron ore requires a much more energy intensive and complicated process to smelt. Bronze can be...

### Iron vs. Bronze: History of Metallurgy - Video & Lesson ...

The Iron Age followed the Bronze Age. This was the period of time when people made tools of iron. Iron tools were stronger than bronze tools. Weapons were more powerful. Iron weapons began in the Middle East and in southeastern Europe around 1200 BCE. They did not show up in China until around 600 BCE. The Stone Age, the Bronze Age, and the Iron Age are called the three-age system. The years ...

### Stone Age, Bronze Age, Iron Age - Archaeology for Kids

The discovery of ways to heat and forge iron kicked off the Iron Age (roughly 1,300 B.C. to 900 B.C.). At the time, the metal was seen as more precious than gold, and wrought iron (which would be...
