Reader-friendly textbook Features innovative case-based approach Provides clear and concise overview of basic mechanisms Practical text for veterinary students, instructors and clinicians alike Students, instructors, and veterinary clinicians seeking a concise, practical handbook will find *Veterinary Clinical Pathology: An Introduction* invaluable.

Abnormalities of cells and tissues, caused by injury, in nonhuman vertebrate animal species are explained in this textbook by renowned veterinary pathologist Norman F. Cheville. It provides a framework of basic principles of general pathology and adds to this new knowledge of molecular pathology in a clear, understandable manner for students. This text contains instruction in the interaction of disease processes, as well as information about the ways basic pathologic processes interact during disease. There is emphasis on gross and light microscopic changes, mechanisms responsible for events in disease, and interspecies comparisons. The book features clear, easily understood descriptions and explanations supplemented by over 100 tables, 50 line illustrations, and 143 photographs. Undergraduate and graduate students in veterinary medicine and biology (especially fish and zoology), and medical pathologists with interests in comparative medicine, will benefit from this book

This book offers a state-of-the-art, evidence-based reference to all aspects of veterinary cytology. Truly multidisciplinary in its approach, chapters are written by experts in fields ranging from clinical pathology to internal medicine, surgery, ophthalmology, and dermatology, drawing the various specialties together to create a comprehensive picture of cytology's role in diagnosis and treatment of animal disease. Firmly grounded in the primary literature, the book focuses on companion animals, with special chapters for species with fewer publications. Chapters are logically organized by body system, with additional chapters on tumors of particular import and diagnostic decision making. The first two sections of Veterinary Cytology focus on cytology techniques, quality control, and special laboratory techniques. Subsequent sections are organ/tissue-based and reflect what is known about the canine, feline, and equine species. This is followed by chapters on non-traditional species, including exotic companion mammals, rabbits, cattle, camelids, non-human primates, reptiles and birds, amphibians, fish, invertebrates, and sheep and goats. The last section highlights some unique features of the applications of cytology in industry settings. Provides a gold-standard reference to data-driven information about cytologic analysis in companion animal species Brings together authors from a wide range of specialties to present a thorough survey of cytology's use in veterinary medicine Offers broader species coverage and greater depth than any cytology reference currently available Veterinary Cytology is an essential resource for clinical and anatomic pathologists and any specialist in areas using cytology, including veterinary oncologists, criticalists, surgeons, ophthalmologists, dermatologists, and internists.

Veterinary Ocular Pathology: A Comparative Review links the clinical features of ocular disease with gross and microscopic pathology to demonstrate the essential features observable during diagnosis. It is designed to be kept next to the microscope as an invaluable guide to accurate diagnosis in ocular pathology. The book presents a wide range of images of the highest quality. A unique and distinctive feature is the juxtaposition of clinical and pathological images while offering detailed enumeration of the diagnostic features. Expert comparative comments by Dr Daniel Albert and contextual information on relative incidence are provided throughout. The authors address spontaneous disease of the eye in all animal species, with a particular emphasis on companion species. In addition, specific, common or interesting conditions of exotic species are included. A convenient, comprehensive and easy-to-use reference for veterinary pathologists, veterinary ophthalmologists, students and comparative vision scientists. The first text devoted to the pathology of spontaneous diseases of the eyes and periocular tissues of domestic animal species Exceptionally high quality illustrations are presented throughout, demonstrating clinical features, gross pathology and histopathology Written by pathologists and clinicians Includes a chapter devoted to the pathology of conditions associated with glaucoma in domestic animals
