About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Copepod crustaceans are the most numerous multicellular animals on earth. They occur in every free-living and parasitic aquatic niche. Copepods have been known since the time of Aristotle, yet there has never been a history of the study of copepods. This volume, the first in a planned three-volume series, reviews the discoveries of copepods to 1832, the year that the two distinct branches, the free-living copepods (long-known as insects) and the parasitic copepods (thought to be molluscs or worms) were finally acknowledged as members of the same Class Crustacea. The narrative includes the biographies of 90 early copepodologists and recounts their most important contributions to science. Portraits are included for two-thirds of the subjects, with considerable new material as well as information and illustrations from obscure sources. Milestones include the first description of copepods (ca. 350 BC), the first illustration (1554), the first free-living freshwater copepod (1688), the first explanation of a free-living copepod's metamorphosis (1756), the first permanently named copepod (1770), and the first description of a parasitic copepod's metamorphosis (1819). The work ends with a transition to the mid-19th century, previewing numerous personal connections that pointed toward copepodology's Golden Age in the 1890s, to be covered in Volume 2. A final volume will take the history of the study of copepods to ca. 1950.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.
