Isaac Physics

For hundreds of years since Isaac Newton first wrote his paper on his ideas on gravity, physicists have been searching the universe for the true nature of the forces that govern us. Only recently they have found the first dark galaxy, a galaxy that doesn't seem to want to follow our understanding of how gravity works.

theory—four basic laws: three laws of motion and the law of universal gravitation. Newton's first law of motion concerns any object that has no force applied to it. An object not subject to an external force will continue in its state of motion at a constant speed in a straight line.

Isaac Newton's Influence on Modern Science

Sir Isaac Newton PRS (25 December 1642 – 20 March 1726/27) was an English mathematician, physicist, astronomer, theologian, and author (described in his own day as a "natural philosopher") who is widely recognised as one of the most influential scientists of all time and as a key figure in the scientific revolution.
