This book is a thorough and easy-to-use guide to gynecology for residents preparing for their CREOG and board examinations. Books available for gynecology residents are generally either clinically directed or academically based. The books in the first group are usually brief, suitable as handbooks for residents to use during daily practice. These books, however, do not provide adequate background information to prepare for CREOG or ABOG board examinations. The more academically-focused books provide detailed background, but do not offer simple and quick assistance during daily practice or studying. This book aims to provide the most beneficial parts of both products. Throughout, the material is simplified and well-organized to provide an excellent resource for clinical practice, with ample use of bullets and key points. The content is also comprehensive, providing the appropriate background knowledge and a systematic approach that makes it an excellent source for the board examination. Topics are divided into four sections: general gynecology, urogynecology, reproductive endocrinology and infertility, and gynecology oncology. Chapters then cover all major topics in each area, including uterine fibroids, polycystic ovary syndrome, and genital infections. Each chapter additionally includes multiple choice questions for residents to test their knowledge of the material. This is an ideal guide for residents

in OBGYN and practicing gynecologists looking for a refresher and quick reference.

"Taken as a whole, the book covers a wide range of medical, obstetrical and fetal complications. Each chapter in the book concerns a single patient with a problem in clinical obstetrics. Some of the authors based their chapters on actual patients, although names and medical details were altered; others described a patient who was a composite. Each chapter begins with a description of the patient at presentation and concludes with delivery of the infant. The student is asked a number of multiple-choice questions, usually concerning management of the patient, and the correct answer is then explained. In addition, each chapter has didactic sections covering areas such as pathophysiology, not amenable to a multiple-choice format. The patient care described in these chapters is based on current evidence and recommendations, and thus represents our optimum faculty input. We chose not to reference each statement, but each chapter concludes with a list of references for additional reading. The old saying is that "good judgment comes from experience." We hope that you, the trainee, will use this book to get practical experience with patients, some of whom you may never have met, and some of whom may seem all too familiar"--Provided by publisher.
