What is Oral Surgery? - BAOS

This results in a split or gap in the roof of the mouth, lip or both. An oral surgeon typically participates in the correction of these clefts. Facial infections. An infection in the face, neck or jaws may require an oral surgeon to drain the infected area and extract any teeth that may be causing the infection or affected by it. Facial injury repair. An oral surgeon can perform surgery to repair broken bones in the face and ensure that the break does not result in an infection or damage of ...

Oral Surgery Procedures - Dental Associates

On the day of surgery you should avoid rinsing your mouth out vigorously as this may cause bleeding. You should clean your teeth normally, including those teeth next to the site of the biopsy. If you find that food catches around the stitches then the area can be gently rinsed with a mouthwash or warm salt water (dissolve a teaspoon of kitchen salt in a cup of warm water) commencing on the day ...

Step 1: assessing and preparing the dental implant site Because dental implants fuse into your jawbone, your dentist will check the condition of the bone site and make sure there's enough bone density to hold the implant securely. Your dentist will also use x-rays to check for nearby blood vessels and nerves.
