When Business and Personal Values Collide “Defining moments” occur when managers face business decisions that trigger conflicts with their personal values. These moments test a person's commitment to those values and ultimately shape their character. But these are also the decisions that can make or break a career. Is there a thoughtful, yet pragmatic, way to make the right choice? Bestselling author Joseph Badaracco shows how to approach these dilemmas using three case examples that, when taken together, represent the escalating responsibilities and personal tests managers face as they advance in their careers. The first story presents a young manager whose choice will affect him only as an individual; the second, a department head whose decision will influence his organization; the third, a corporate executive whose actions will have much larger, societal ramifications. To guide the decision-making process, the book draws on the insights of four philosophers—Aristotle, Machiavelli, Nietzsche, and James—who offer distinctly practical, rather than theoretical, advice. *Defining Moments* is the ultimate manager's guide for resolving issues of conflicting responsibility in practical ways.

Behavior Analysis and Learning, Fifth Edition is an essential textbook covering the basic principles in the field of behavior analysis and learned behaviors, as pioneered by B. F. Skinner. The textbook provides an advanced introduction to operant conditioning from a very consistent Skinnerian perspective. It covers a range of principles from basic respondent and operant conditioning through applied behavior analysis into cultural design. Elaborating on Darwinian components and biological connections with behavior, the book treats the topic from a consistent worldview of selectionism. The functional relations between the organism and the environment are described, and their application in accounting for old behavior and generating new behavior is illustrated. Expanding on concepts of past editions, the fifth edition provides updated coverage of recent literature and the latest findings. There is increased inclusion of biological and neuroscience material, as well as more data correlating behavior with neurological and genetic factors. The chapter on verbal behavior is expanded to include new research on stimulus equivalence and naming; there is also a more detailed and updated analysis of learning by imitation and its possible links to mirror neurons. In the chapter on applied behavior analysis (ABA), new emphasis is given to contingency management of addiction, applications to education, ABA and autism, and prevention and treatment of health-related problems. The material presented in this book provides the reader with the best available foundation in behavior science and is a valuable resource for advanced undergraduate and graduate students in psychology or other behavior-based disciplines. In addition, a website of supplemental resources for instructors and students makes this new edition even more accessible and student-friendly (www.psyppress.com/u/pierce).
