Paint pigments - yellow, brown, blue, green, and bronze

Before the dawn of the Industrial Age, the only yellow pigments available to painters were mined from the earth, yellow ochre. One of the oldest pigments, yellow ochre, was used by the ancient Egyptians to paint the skin tones on their murals. It's still popular with artists today, partly because it's opaque and harmonizes well with other colors or grays them down.The color varies among manufacturers and even from batch to batch, ranging from a pale earthy yellow to a dark brown.

Yellow Pigments and Their Stories | Artists Network

The CI numbers (Colour Index) all start with P for pigment and the next letter stands for the hue B=Blue, Br=Brown, Y=Yellow, V=Violet, etc. Then the number tells you the specific pigment. You don't need to know the chemical name, the number is enough to compare one paint tube to another. It is the number written on the tube, not the name.

Pigments and Colour Names - Jackson's Art Blog

Inorganic Blue Pigments The blue pigment range is dominated by one chemical type - Phthalocyanine.It is considered as the ideal pigment to impart blue color in paints and coatings. Other blue pigments include: Indanthrone which is used for particular high quality applications; Ultramarine and Prussian blue are two inorganic pigments occasionally used; The printing ink industry uses some ...

Inorganic Pigments for Paints, Coatings and Inks

The modern pigment sold as "mummy brown" is composed of a mixture of kaolin, quartz, goethite and hematite, with the hematite and goethite (generally 60% of the content) determining the colour ∅ the more hematite the redder the pigment ∅ and the others being inert substances that can vary the opacity or tinting strength.
