Diagnostic Pathology: Blood and Bone Marrow | ScienceDirect

A physician may also perform a bone marrow biopsy, which uses a large needle to remove a sample of the bone marrow. The purpose of this procedure is to diagnose lymphoma and leukemia or determine whether certain types of cancer, such as breast or prostate, have spread to the bones.

Understanding Your Biopsy Results and Pathology Report

Right Posterior Superior Iliac Spine, Bone Marrow Biopsy: - Predominantly benign dense fibrous tissue with a small amount of laminar bone, and minute fragment of marrow (<2 mm). - Case will be sent to hematopathology for further assessment.

Bone—Libre Pathology

Abstract. As a major hematopoietic and lymphoid organ, morphological evaluation of the bone marrow is an important component of toxicity or safety assessment studies. While definitive characterization of bone marrow lesions often requires cytological aspirates or smears, assessment of histological bone marrow sections provides information regarding tissue architecture and hematopoietic status that is relevant for the detection of direct or indirect responses to chemical exposure.

Histopathology of bone marrow—PubMed

There are two types of marrow: red and yellow. Red marrow is mainly found in your flat bones such as your hip and vertebrae. As you age, more of your marrow becomes yellow due to an increase in fat...
