This paper presents an educational methodology of cooperative project-based learning. This methodology emerges in the final years of the undergraduate programme of the Technical University of Madrid. The paper focuses on the evolution of this experience up to its insertion in the European Higher Education Area (EHEA), incorporating the project management competences of the International Project Management Association (IPMA) and broadening its

Project management educators often fail to provide project managers with adequate skills and expertise they need in an increasingly complex work environment. In this paper, we analyze how problem-based learning (PBL) approaches can be used to increase the effectiveness of advanced project management education. We use PBL in the design and implementation of an advanced course in project ...

PBL Lab

Engineering education needs to revise and change its curriculum to integrate ESD principles and knowledge. Problem based learning (PBL) has been one of the main learning pedagogies used to integrate sustainability in engineering education. However, there is a lack of understanding of the relation between ESD and PBL principles and the ways in which they can be integrated and practised in the engineering curricula.

Project-based learning (PBL) is a student-centered pedagogy that involves a dynamic classroom approach in which it is believed that students acquire a deeper knowledge through active exploration of real-world challenges and problems. Students learn about a subject by working for an extended period of time to investigate and respond to a complex question, challenge, or problem.
