Examines how the president balances the competing demands of leading his political party and leading the nation.

A classic on the politics of leadership, now expanded to include a new chapter on the Obama presidency. Examines the typical political problems that presidents confront and how they assert their authority in the service of change.

The belief that U.S. presidents' legislative policy formation has centralized over time, shifting inexorably out of the executive departments and into the White House, is shared by many who have studied the American presidency. Andrew Rudalevige argues that such a linear trend is neither at all certain nor necessary for policy promotion. In *Managing the President's Program*, he presents a far more complex and interesting picture of the use of presidential staff. Drawing on transaction cost theory, Rudalevige constructs a framework of "contingent centralization" to predict when presidents will use White House and/or departmental staff resources for policy formulation. He backs his assertions through an unprecedented quantitative analysis of a new data set of policy proposals covering almost fifty years of the postwar era from Truman to Clinton. Rudalevige finds that presidents are not bound by a relentless compulsion to centralize but follow a more subtle strategy of staff allocation that makes efficient use of limited bargaining resources. New items and, for example, those spanning agency jurisdictions, are most likely to be centralized; complex items follow a mixed process. The availability of expertise outside the White House diminishes centralization. However, while centralization is a management strategy appropriate for engaging the wider executive branch, it can imperil an item's fate in Congress. Thus, as this well-written book makes plain, presidential leadership hinges on hard choices as presidents seek to simultaneously manage the executive branch and attain legislative success.

This book examines the foreign policy decisions of the presidents who presided over the most critical phases of America's rise to world primacy in the twentieth century, and assesses the effectiveness and ethics of their choices. Joseph Nye, who was ranked as one of *Foreign Policy* magazine's 100 Top Global Thinkers, reveals how some presidents tried with varying success to forge a new international order while others sought to manage America's existing position. The book shows how transformational presidents like Wilson and Reagan changed how America sees the world, but argues that transactional presidents like Eisenhower and the elder Bush were sometimes more effective and ethical. It also draws important lessons for today's uncertain world, in which presidential decision making is more critical than ever.

Examines the impact of medical and psychological illness on foreign policy decision making. Illness provides specific, predictable, and recognizable shifts in attention, time perspective, cognitive capacity, judgment, and emotion, which systematically affect impaired leaders. In particular, this book discusses the ways in which processes related to aging, physical and psychological illness, and addiction influence decision making. This book provides detailed analysis of four cases among the American presidency. Woodrow Wilson's October 1919 stroke affected his behavior during the Senate fight over ratifying the League of Nations. Franklin Roosevelt's severe coronary disease influenced his decisions concerning the conduct of war in the Pacific from 1943–1945 in particular. John Kennedy's illnesses and treatments altered his behavior at the 1961 Vienna conference with Soviet Premier Khrushchev. And Nixon's psychological impairments biased his decisions regarding the covert bombing of Cambodia in 1969–1970.

This study aims to demonstrate that presidents are persistent agents of change, continually disrupting and transforming the political landscape. The politics of the "third way" is also discussed in relation to Bill Clinton's political strategies.
