This mathematical fact turns out to have an important physical consequence. Let  $x(t)$  be a physical trajectory for a particle in a force field for which  $x(0) = x_0$  is a point of equilibrium; that is, a point where the force field vanishes. Then if  $x'(0) = 0$  then  $x(t) = x_0$  for all  $t$ . Indeed, the constant trajectory  $x(t) = x_0$  for all  $t$  obeys Newton's

Mathematical physics refers to the development of mathematical methods for application to problems in physics. The Journal of Mathematical Physics defines the field as "the application of mathematics to problems in physics and the development of mathematical methods suitable for such applications and for the formulation of physical theories". An example of mathematical physics: solutions of Schrödinger's equation for quantum harmonic oscillators with their amplitudes.
