Prior to the 1994 Northridge and 1995 Kobe earthquakes, engineers believed that steel moment-frames would bend under earthquake loading, but not break. As a result, this became one of the most common types of construction used for major bldgs. in areas subject to severe earthquakes. The discovery of the potential for fracturing in these frames called to question the adequacy of the building code provisions dealing with this type of construction and created a crisis of confidence. In response, FEMA issued this policy guide to provide a non-technical summary of valuable information, an understanding of the risk associated with steel moment-frame buildings, and the practical measures that can be taken to reduce this risk. These proceedings contain the papers presented at the Third International Conference and Exhibition on Engineering Software held at Imperial College, London during the period April 11th - 13th, 1983. I must thank again the authors who submitted the large numbers of papers which made selection a difficult task. The theme of the conference is the use and application of computers in engineering. Many abbreviations have been invented to describe the use of computers from CAD, CAM, CADMAT etc. but the term which best describes the scope of the conference is Computer Aided Engineering, CAE. The papers have been split into sections covering different application areas such as Mechanical Engineering, Civil Engineering. Other sections cover techniques such as Finite Elements, Boundary Elements and General Simulation. An important session at the conference was the new field of engineering databases and as in past conferences the special sessions were devoted to microcomputers. R.A. ADEY (EDITOR) ENGINEERING SOFTWARE DESIGN 3 MENU INPUT GENERATING SYSTEM FOR THE FORTRAN PROGRAMS I. Kovacic Institute of Structural and Earthquake Engineering Department of Civil Engineering University "Edvard Kardelj" of Ljubljana, Yugoslavia INTRODUCTION Although fortran is losing competition with the new languages it is still very used programming language, especially in the technical software production. Technical tasks are not to be described by a lot of data usually, as in business applications.

With this new book you'll quickly learn, step-by-step, the basic methods (and some valuable tricks of the trade) to master high-speed metal stud framing in commercial construction. If you're an experienced wood framer, you already have many of the skills you'll need. This manual, written by a framer who runs work for one of the largest metal stud contractors in the country, tells you just about everything you need to know to transfer those skills to metal stud framing in commercial buildings.

Packed with plumbing isometrics and helpful illustrations, this guide makes clear the code requirements for installing materials for plumbing and gas systems. Includes code tables for pipe sizing and fixture units, and code requirements for just about all areas of plumbing, from water supply and vents to sanitary drainage systems. Covers the principles and terminology of the code, how the various systems work and are regulated, and code-compliance issues you'll likely encounter on the job.
