In the dark, frenzied years of World War II, the San Francisco Bay Area was the geographic center of a \$6.3 billion West Coast shipbuilding industry. Stretching from the Golden Gate to Vallejo to Sunnyvale, 14 Bay Area yards launched many of the ships that helped save the free world. Basalt Rock of Napa, Bethlehem Steel of San Francisco and Alameda, Hunters Point and Mare Island Naval Shipyards, Joshua Hendy Iron Works of Sunnyvale, Marinship of Sausalito, Permanente Metals in Richmond, and Western Pipe and Steel in South San Francisco are names that still conjure memories for many locals of one of the most impassioned war efforts in human history. Offering new opportunities for African Americans and women, recruiters searched the nation for workers who relocated here by the thousands. These motivated men and women delivered Liberty cargo ships like the SS Robert E. Peary, built in seven and a half days, a shipbuilding record that stands to this day.

Caroline worries that British spies may be lurking in Sackets Harbor, but when strange things start happening at Abbott's Shipyard Caroline wonders if a spy, either someone she has known all her life or Papa's long-lost friend, is responsible.

Towards the end of the nineteenth century, a new firm was established in Bath, Maine, at a time when established yards in the City of Ships were turning to steel construction. Percy and Small would set unrivaled records for wooden shipbuilding and ship management, launching 22 giant five- and six-masted schooners (along with 16 four-masters) in two decades. Not just builders, Percy and Small also demonstrated an unusual knack for making money as managing owners of a large fleet of schooners, and the stories of their ships are told in these pages in wonderful detail, from the wooing of potential shareholders and the elaborate launching festivities (with one schooner stuck on the ways) to deeply laden coal schooners struggling to stay off the lee shore, daring captains navigating treacherous shoals, and the perils of collisions, dismastings, fires, and enemy submarines. At sea in a storm, a giant six-master heavy with coal needed great strength to survive. Percy and Small developed specialized shipbuilding techniques that pushed the wooden hull to its limits when the rest of the world had turned to steel construction. Doug Lee's meticulously researched construction drawings add immeasurably to the technical information presented in this book. Maritime enthusiasts and modelmakers will find a wealth of information here.
