The traditional way to short-sell involves selling a borrowed asset in the hope that its price will go down and buying it back later for a profit. Borrowing the asset comes at a cost, which is normally a small percentage of the asset's price. Short-selling can also be done via CFD trading or spread betting. Both are derivatives, which enable you to speculate on the price movements of the underlying asset without taking ownership of it.

Short selling is more than a necessary evil. It makes markets become more transparent and efficient. The incentive to short sell allows for the truer pricing of financial assets. If there was no short selling, there would be numerous fake-priced assets that can even expose a market to greater risks, such as a bubble.

The second strategy of short selling is to identify a downward flip figure such as a shoulder-head shoulder, an ascending bevel or a double-top. To increase your chances of winning, you can combine bearish breakout on the bullish line with the flipping figure. A third short selling strategy is to play price differentials with moving averages.
