So the nature of an explanation is to understand something – to have a working model of it. All explanations are incomplete because at some point they all must take something for granted. When you explain something to another person, “what is conveyed is a blueprint for the construction of a working model.”

When trying to describe the nature of science, it can be useful to think of science as a culture in just the same way that we think of the cultural worlds of art and music. We need to understand and talk art or music when we enter these worlds. In the same way, we need to be able to understand and talk science.

The nature of causation is one of the perennial problems of philosophy, so on the basis of this connection one might reasonably attempt to trace thinking about the nature of explanation to antiquity. (Among the ancients, for example, Aristotle's theory of causation is plausibly regarded as a theory of explanation.)

Theories of Explanation | Internet Encyclopedia of Philosophy

Accordingly, some have argued that the constructive interpretation view engages with the other methodological views mentioned above only if it denies what they assert: viz., that legal theories attempt to provide an explanation (perhaps of some particular kind—e.g., reductive) of the actual nature of law (or perhaps our concept of it).
