A transformative, fascinating theory"based on robust and groundbreaking experimental research"reveals how our unconscious fear of death powers almost everything we do, shining a light on the hidden motives that drive human behavior More than one hundred years ago, the American philosopher William James dubbed the knowledge that we must die "the worm at the core" of the human condition. In 1974, cultural anthropologist Ernest Becker won the Pulitzer Prize for his book The Denial of Death, arguing that the terror of death has a pervasive effect on human affairs. Now authors Sheldon Solomon, Jeff Greenberg, and Tom Pyszczynski clarify with wide-ranging evidence the many ways the worm at the core guides our thoughts and actions, from the great art we create to the devastating wars we wage. The Worm at the Core is the product of twenty-five years of in-depth research. Drawing from innovative experiments conducted around the globe, Solomon, Greenberg, and Pyszczynski show conclusively that the fear of death and the desire to transcend it inspire us to buy expensive cars, crave fame, put our health at risk, and disguise our animal nature. The fear of death can also prompt judges to dole out harsher punishments, make children react negatively to people different from themselves, and inflame intolerance and violence. But the worm at the core need not consume us. Emerging from their research is a unique and compelling approach to these deeply existential issues: terror management theory. TMT proposes that human culture infuses our lives with order, stability, significance, and purpose, and these anchors enable us to function moment to moment without becoming overwhelmed by the knowledge of our ultimate fate. The authors immerse us in a new way of understanding human evolution, child development, history, religion, art, science, mental health, war, and politics in the twenty-first century. In so doing, they also reveal how we can better come to terms with death and learn to lead lives of courage, creativity, and compassion. Written in an accessible, jargon-free style, The Worm at the Core offers a compelling new paradigm for understanding the choices we make in life"and a pathway toward divesting ourselves of the cultural and personal illusions that keep us from accepting the end that awaits us all. Praise for The Worm at the Core "The idea that nearly all human individual and cultural activity is a response to death sounds far-fetched. But the evidence the authors present is compelling and does a great deal to address many otherwise intractable mysteries of human behaviour. This is an important, superbly readable and potentially life-changing book."The Guardian (U.K.) "A neat fusion of ideas borrowed from sociology, anthropology, existential philosophy and psychoanalysis."The Herald (U.K.) "Deep, important, and beautifully written, The Worm at the Core describes a brilliant and utterly original program of scientific research on a force so powerful that it drives our lives."Daniel Gilbert, Edgar Pierce Professor of Psychology, Harvard University, and author of Stumbling on Happiness "As psychology becomes increasingly trivial, devolving into the promotion of positive-thinking platitudes, The Worm at the Core bucks the trend. The authors present"and provide robust evidence for"a psychological thesis with disturbing personal as well as political implications."John Horgan, author of The End of War and director of the Center for Science Writings, Stevens Institute of Technology

Demonstrates how an unconscious fear of death motivates nearly all human goals, behaviors and cultures, examining the role of mortality awareness in prompting social unrest and war.

Proof of a ground-breaking psychological theory: that the fear of death is the hidden motive behind almost everything we do. 'A joy ... The Worm at the Core asks how humans can learn to live happily while being intelligently aware of our impending doom, how knowledge of death affects the decisions we make every day, and how we can stop fear and anxiety overwhelming us' Charlotte Runcie, Daily Telegraph 'Provocative, lucid and fascinating' Financial Times 'An important, superbly readable and potentially life-changing book . . . suggests one should confront mortality in order to live an authentic life' Tim Lott, Guardian 'Deep, important, and beautifully written ... utterly original' Daniel Gilbert

Social and personality psychologists traditionally have focused their attention on the most basic building blocks of human thought and behavior, while existential psychologists pursued broader, more abstract questions regarding the nature of existence and the meaning of life. This volume bridges this longstanding divide by demonstrating how rigorous experimental methods can be applied to understanding key existential concerns, including death, uncertainty, identity, meaning, morality, isolation, determinism, and freedom. Bringing together leading scholars and investigators, the Handbook presents the influential theories and research findings that collectively are helping to define the emerging field of experimental existential psychology.

Uses the disciplines of psychology, anthropology, sociology and psychiatry to explain what makes people act the way they do.

Winner of the Pulitzer prize in 1974 and the culmination of a life's work, *The Denial of Death* is Ernest Becker's brilliant and impassioned answer to the 'why' of human existence. In bold contrast to the predominant Freudian school of thought, Becker tackles the problem of the vital lie - man's refusal to acknowledge his own mortality. The book argues that human civilisation is a defence against the knowledge that we are mortal beings. Becker states that humans live in both the physical world and a symbolic world of meaning, which is where our 'immortality project' resides. We create in order to become immortal - to become part of something we believe will last forever. In this way we hope to give our lives meaning. In *The Denial of Death*, Becker sheds new light on the nature of humanity and issues a call to life and its living that still resonates decades after it was written.

Ernest Becker (1924-1974) was an astute observer of society and human behavior during America's turbulent 1960s and 1970s. Trained in social anthropology and driven by a transcending curiosity about human motivations, Becker doggedly pursued his basic research question, "What makes people act the way they do?" Dissatisfied with what he saw as narrowly fragmented methods in the contemporary social sciences and impelled by a belief that humankind more than ever needed a disciplined, rational, and empirically based understanding of itself, Becker slowly created a powerful interdisciplinary vision of the human sciences, one in which each discipline is rooted in a basic truth concerning the human condition. That truth became an integral part of Becker's emerging social science. Almost inadvertently, he outlined a perspective on human motivations that is perhaps the most broadly interdisciplinary to date. His perspective traverses not only the biological, psychological, and social sciences but also the humanities and educational, political, and religious studies. Ernest Becker is best known for the books written in the last few years before his death from cancer, including the highly praised Pulitzer Prize-winning volume *The Denial of Death* (1974) and *Escape from Evil* (1975). These late works, however, were built on a distinguished body of earlier books, essays, and reviews. The power and strength of Becker's ideas are fully present in his early works, which underlie his later contributions and give direction for interpreting the development of his ideas. Although Ernest Becker's life and career were cut short, his major writings have remained continually in print and have captured the interest of subsequent generations of readers. *The Ernest Becker Reader* makes available for the first time in one volume much of Becker's early work and thus places his later work in proper context. It is a major contribution to the ongoing interest in Becker's ideas.

Worms don't take good family photos, do they? Find out in this hilarious picture book from a Caldecott Honor illustrator and debut author about a young worm who comes to appreciate her very unusual family for who they are. Emma is excited for her worm family to have their portrait taken. But when she sees her other friends' portraits, she gets discouraged. "We had the most beautiful smiles," Ellie the Chipmunk squeals. Abigail the Cat meows, "I looked gorgeous with my big poufy hair." The worm family doesn't have teeth...how will they show their beautiful smiles? They don't have hair either...how can it look big and poufy?! So Emma gathers wigs, giant fake teeth, and colorful clothing for her parents and sisters. But it's only after taking off their costumes that the worm family is able to wriggle and squiggle and squeeze into a delightful pose that only a worm family can make. And Emma? She thinks it's perfectly perfect.

"Join in the rainy-day fun as kids splash through the puddles, affecting another weather enthusiast, a nearby worm. The worm delights in the weather just as much as the kids"--

This text explores the emotions of despair, fear and anger that arose after the terrorist attacks on the World Trade Center and the Pentagon in the Autumn of 2001. The authors analyse reactions to the attacks through the lens of terror management theory, an existential psychological model that explains why humans react the way they do to the threat of death and how this reaction influences their post-threat cognition and emotion. The theory provides ways to understand and reduce terrorism's effect and possibly find resolutions to conflicts involving terrorism. The authors focus primarily on the reaction in the US to the 9/11 attack, but their model is applicable to all instances of terrorism, and they expand their discussion to include the Israeli-Palastinian conflict.
