Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the ' top 100 drugs ' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.

Welcome to the go-to drug guide for all Women's Health Nurse Practitioners and Top 100 Drugs in Midwifery and Women's Health is precisely designed for advanced practice professionals to accurately treat and prescribe for their patients across their lifespan, from obstetrics to adult-gerontology. Master the pharmacologic principles and drug information you need to safely and effectively prescribe drugs for primary care! Edmunds' Pharmacology for the Primary Care Provider, 5th Edition is written for Nurse Practitioners, other Advanced Practice Nursing prescribers, and Physician Assistants. Unlike other pharmacotherapeutics textbooks, it focuses on the drugs most commonly used in primary care settings. A new chapter format and body-system approach make learning easier, and standardized clinical guidelines ensure best practices in pharmacotherapeutics. Updated and impeccably accurate drug content includes the latest drug classes, specific drugs, and therapeutic uses in primary care. Continuing to emphasize health promotion strategies, this new edition includes new chapters on pharmacogenetics, drugs for ADHD, nutritional supplements, and more. Comprehensive pharmacotherapeutics content is written specifically for Nurse Practitioners, other Advanced Practice Nurses, and Physician Assistants. Focus on key drugs highlights the most commonly prescribed and most representative drugs of each major drug class — with particular emphasis on the top 100 prescribed drugs. Emphasis on patient teaching helps you communicate with patients and family caregivers to promote adherence to the drug regimen. Emphasis on health promotion describes how to help patients stay well and improve their health, including coverage of vitamins, weight management, immunizations and biologicals, and smoking cessation. Complementary and Alternative Therapies tables highlight significant dietary and herbal interactions with FDA-approved drugs.

Prescribing for children is problematic. Children are not small adults in terms of their physiology, and they cannot be subjects in clinical trials. This makes prescribing for them something of an art and a daunting one at that for trainees. Will Carroll (co-editor of the Illustrated Textbook of Paediatrics amongst other titles for paediatrics trainees) with a team of fellow paediatricians and a hospital pharmacist have sought to demystify prescribing for children. The team has identified what from their experience are the most common drugs prescribed to children and have addressed each one, adding detail about how each medicine works. Each chapter follows the ABCDE structure covering Absorption, Biological effects, Clearance, Dosing and side Effects in children. This book is a succinct, portable reference, modelled closely on Hitchings et al.: The Top 100 Drugs. Written in conjunction with a hospital pharmacist for drug expertise. User-friendly double-page-spread approach. Each drug entry preceded by clinical pharmacology information with consistent headings: Why and when; Absorption; Biology. Each drug presented in consistent categories: Clearance; Dosing; Administration; Side effects and interactions; Monitoring and Cost.

More than 1,000 generic name drugs, encompassing over 4,000 trade name drugs, are organized alphabetically with A-to-Z tabs for quick and easy access. UNIQUE! Herbal information is included in the appendix and on the Evolve website, covering the interactions and effects of commonly encountered herbs. Detailed information for each drug includes side effects listed by frequency, and adverse effects and reactions requiring prompt intervention. Drugs by Disorder are listed in the front of the book for easy reference, showing common disorders and the drugs most often used for treatment. Drug Classifications section features an overview of actions and uses for drug families. Black Box Alerts and High Alert drugs are highlighted to promote safe administration of drugs that pose the greatest risk for patient harm, and Do Not Confuse With warnings call out drug names that sound alike or look alike. Top 100 Drugs list identifies the most frequently administered drugs. Cross-references to the 400 top U.S. brand-name drugs are located throughout the book for easy access. List

of newly approved medications in the front of the book makes it easy to locate the latest drugs. Nursing considerations are organized in a functional nursing process framework and include baseline assessment, intervention/evaluation, and patient/family teaching. Information on lifespan and disorder-related dosage variations covers special considerations for pediatric, geriatric, hepatic, and immune- or renal-compromised patients. Extensive IV content includes IV compatibilities/IV incompatibilities and breaks down key information on reconstitution, rate of administration, and storage. IV Compatibility Chart foldout includes comprehensive compatibility information for 65 intravenous drugs. Fixed combinations are included in dosages of each combined drug directly within the individual monographs, to help students understand different drug dose options for specific diseases. Customizable and printable monographs for 100 of the most commonly used drugs are located on Evolve, along with quarterly drug updates.

Thanks to remarkable advances in modern health care attributable to science, engineering, and medicine, it is now possible to cure or manage illnesses that were long deemed untreatable. At the same time, however, the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care. Total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance. The use of increasingly expensive prescription drugs is a significant part of this problem, making the cost of biopharmaceuticals a serious national concern with broad political implications. Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years, finding a way to make prescription medicines and health care at large more affordable for everyone has become a socioeconomic imperative. Affordability is a complex function of factors, including not just the prices of the drugs themselves, but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts. Therefore, any solution to the affordability issue will require considering all of these factors together. The current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole. Making Medicines Affordable examines patient access to affordable and effective therapies, with emphasis on drug pricing, inflation in the cost of drugs, and insurance design. This report explores structural and policy factors influencing drug pricing, drug access programs, the emerging role of comparative effectiveness assessments in payment policies, changing finances of medical practice with regard to drug costs and reimbursement, and measures to prevent drug shortages and foster continued innovation in drug development. It makes recommendations for policy actions that could address drug price trends, improve patient access to affordable and effective treatments, and encourage innovations that address significant needs in health care.
