pharmaceutical industry, Continuous Improvement in the Healthcare

Manufacturing Industry provides proven methods for cutting costs and

improving overall performance according to industry standards.

Rather than viewing continuous improvement as a management-led initiative, the author takes a bottom-up approach that involves getting the workforce behind the initiative and then bringing management on board, creating a culture that gives organizations a better and more lasting commitment. She addresses problems that can arise from regulatory pressures, short patent life, competition, right-sizing, and outmoded processes. Features

illness and injury and protecting health in a variety of workplace settings, including the areas of agriculture, construction, health care, manufacturing, and public safety. OHNs need education and training in respiratory protection in order to ensure both their safety and the safety of America's workers. At the request of the National Personal Protective Technology Laboratory of the National Institute for Occupational Safety and Health, the Institute of Medicine (IOM) examined existing respiratory protection curricula and made recommendations to improve education and training in respiratory protection for OHNs. The IOM finds that current respiratory protection education receives varying amounts of dedicated time and resources and is taught using a variety of approaches.

Society, the Dutch Ergonomics Society, NIA TNO and The Ministry of Social Affairs and Employment. These experiences include new ideas, research results, tools, and applications of human-organization interface technology to improving work systems. New technology, changing work force demographics, changing attitudes and values about work and what constitutes real quality of work life, have heightened the need for a true systems approach to optimizing the interfaces between humans, technology and organizational structures and processes. Growing world competition, and the related need to make organizations more productive and efficient, have further intensified this need to improve work systems. This need is reflected in the rapid development of

macroergonomics methods and applications since the first of these ODAM Symposia in 1984. What then was recognized by only a few researchers and practitioners has now become a widely accepted part of the human factors/ergonomics discipline. As demonstrated by the papers contained herein, application of macroergonomics is having a very real positive impact on sociotechnical systems internationally. Included in this volume are a broad selection of papers on theory, methodology, tools, research findings, and case studies from leading professionals throughout the world. This volume thus provides the reader with some of the latest developments in human-organization interface technology. Collectively, these papers should provide the reader with a good conceptual

understanding of the ergonomic approach to work system design, and of its tremendous potential for improving work systems and the human condition in all cultures.

The FDA and ISO 9001 require manufacturers to institute comprehensive and rigorous pre-production quality assurance processes to assure that design defects will be eliminated prior to manufacture and product sale. Pre-Production Quality Assurance for Healthcare Manufacturers addresses the product design and development phases for a medical product life cycle and shows how this effort can be successfully undertaken in accord with current Good Practice and ISO 9001. The authors provide a detailed step-by-step approach to ensuring that
